Capute Scale Scoring Sheets (20): (Set of 20) Pasquale Accardo M.D., The Late Arnold Capute "M.D. M.P.H.", Anna Bennett M.P.H., Elena Keshishian "M.D. Ph.D.", Mary O'Connor Leppert M.D., Thomas Montgomery M.D., Michael Msall M.D., Brian Rogers M.D., Paul Visintainer Ph.D., Robert Voigt M.D. This easy-to-administer tool consists of two tests on separate "streams" of development: visual-motor functioning and expressive and receptive language development. These tests help pinpoint any instances of delay (a slower rate of milestone acquisition), deviancy (any unusual development within a specific stream), and dissociation (an uneven rate of milestone acquisition). Fast and easy to complete, **The Capute Scales** require minimal equipment and can be administered in just 6 to 20 minutes. Because the tests measure functioning across two streams of development, **The Capute Scales** help clinicians distinguish between global developmental delays and specific areas of concern.

Created for use in clinical settings, **The Capute Scales** are effective both as a screener for general practitioners and as an assessment tool for specialists such as developmental pediatricians, speech-language pathologists, and occupational therapists. With its high correlation with the **Bayley Scales of Infant Development**, this standardized instrument will assist clinicians in making developmental diagnoses, counseling families, and guiding them to appropriate intervention services.

This product is sold in a package of 20.

These scoring sheets are part of **The Capute Scales**, a norm-referenced, 100-item screening and assessment tool that helps experienced practitioners identify developmental delays in children from 1–36 months of age. Developed by Arnold J. Capute, the founding father of neurodevelopmental pediatrics, this reliable, easy-to-administer tool was tested and refined at the Kennedy Krieger Institute for more than 30 years.
