Geometry: A Comprehensive Course (Dover Books on Mathematics) Dan Pedoe

"A lucid and masterly survey." — *Mathematics Gazette*

Professor Pedoe is widely known as a fine teacher and a fine geometer. His abilities in both areas are clearly evident in this self-contained, well-written, and lucid introduction to the scope and methods of elementary geometry. It covers the geometry usually included in undergraduate courses in mathematics, except for the theory of convex sets. Based on a course given by the author for several years at the University of Minnesota, the main purpose of the book is to increase geometrical, and therefore mathematical, understanding and to help students enjoy geometry.

Among the topics discussed: the use of vectors and their products in work on Desargues' and Pappus' theorem and the nine-point circle; circles and coaxal systems; the representation of circles by points in three dimensions; mappings of the Euclidean plane, similitudes, isometries, mappings of the inversive plane, and Moebius transformations; projective geometry of the plane, space, and n dimensions; the projective generation of conics and quadrics; Moebius tetrahedra; the tetrahedral complex; the twisted cubic curve; the cubic surface; oriented circles; and introduction to algebraic geometry.

In addition, three appendices deal with Euclidean definitions, postulates, and propositions; the Grassmann-Pluecker coordinates of lines in S^3 , and the group of circular transformations. Among the outstanding features of this book are its many worked examples and over 500 exercises to test geometrical understanding.

From reader reviews:

Fred Green:

Now a day people who Living in the era just where everything reachable by talk with the internet and the resources included can be true or not require people to be aware of each facts they get. How people have to be smart in acquiring any information nowadays? Of course the answer is reading a book. Examining a book can help persons out of this uncertainty Information particularly this Geometry: A Comprehensive Course (Dover Books on Mathematics) book because book offers you rich facts and knowledge. Of course the info in this book hundred per-cent guarantees there is no doubt in it as you know.

Jamie Treat:

The book untitled Geometry: A Comprehensive Course (Dover Books on Mathematics) contain a lot of information on that. The writer explains the woman idea with easy technique. The language is very clear to see all the people, so do certainly not worry, you can easy to read it. The book was published by famous author. The author will bring you in the new time of literary works. You can easily read this book because you can read on your smart phone, or program, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can open up their official web-site along with order it. Have a nice study.

Ruth Coleman:

Is it you actually who having spare time subsequently spend it whole day simply by watching television programs or just resting on the bed? Do you need something new? This Geometry: A Comprehensive Course (Dover Books on Mathematics) can be the response, oh how comes? The new book you know. You are so out of date, spending your time by reading in this new era is common not a nerd activity. So what these ebooks have than the others?

Benjamin Munk:

In this particular era which is the greater particular person or who has ability to do something more are more precious than other. Do you want to become among it? It is just simple solution to have that. What you need to do is just spending your time very little but quite enough to possess a look at some books. One of several books in the top list in your reading list is usually Geometry: A Comprehensive Course (Dover Books on Mathematics). This book and that is qualified as The Hungry Hills can get you closer in growing to be precious person. By looking upwards and review this guide you can get many advantages.
