Developmental Genetics of the Flower: Advances in Botanical Research: 44

Developmental Genetics of the Flower: Advances in Botanical Research: 44

Current major interests in this area include the study of higher level phylogenetic relationships and character evolution in the angiosperms, floral evolution, the genetic basis of key floral differences in basal angiosperms, the genetic and genomic consequences of polyploid speciation, conservation genetics of rare plant species, and phylogeography. This book provides a series of papers focused on the developmental genetics of flowering as well as the genetic control of the timing of flowering. Investigation of speciation mechanisms, evolutionary relationships, and character evolution in flowering plants and land plants utilizing a variety of experimental approaches are discussed. The chapters are excellent reviews of the current fast-moving area of research.

- * Provides a brief review of genes known to regulate flower development
- * Articles emphasize the classic ABC model of flower development
