**Multiple Comparisons Using R** Frank Bretz, Torsten Hothorn, Peter Westfall

Adopting a unifying theme based on maximum statistics, **Multiple Comparisons Using R** describes the common underlying theory of multiple comparison procedures through numerous examples. It also presents a detailed description of available software implementations in R. The R packages and source code for the analyses are available at <http://CRAN.R-project.org>

After giving examples of multiplicity problems, the book covers general concepts and basic multiple comparisons procedures, including the Bonferroni method and Simes' test. It then shows how to perform parametric multiple comparisons in standard linear models and general parametric models. It also introduces the *multcomp* package in R, which offers a convenient interface to perform multiple comparisons in a general context. Following this theoretical framework, the book explores applications involving the Dunnett test, Tukey's all pairwise comparisons, and general multiple contrast tests for standard regression models, mixed-effects models, and parametric survival models. The last chapter reviews other multiple comparison procedures, such as resampling-based procedures, methods for group sequential or adaptive designs, and the combination of multiple comparison procedures with modeling techniques.

Controlling multiplicity in experiments ensures better decision making and safeguards against false claims. A self-contained introduction to multiple comparison procedures, this book offers strategies for constructing the procedures and illustrates the framework for multiple hypotheses testing in general parametric models. It is suitable for readers with R experience but limited knowledge of multiple comparison procedures and vice versa.

See Dr. Bretz discuss the book.

### **From reader reviews:**

#### **Richard Endsley:**

Here thing why this Multiple Comparisons Using R are different and reputable to be yours. First of all looking at a book is good but it really depends in the content from it which is the content is as delightful as food or not. Multiple Comparisons Using R giving you information deeper including different ways, you can find any reserve out there but there is no guide that similar with Multiple Comparisons Using R. It gives you thrill looking at journey, its open up your current eyes about the thing which happened in the world which is maybe can be happened around you. You can actually bring everywhere like in playground, café, or even in your means home by train. Should you be having difficulties in bringing the imprinted book maybe the form of Multiple Comparisons Using R in e-book can be your option.

#### **Kenneth Poor:**

Reading a reserve tends to be new life style with this era globalization. With studying you can get a lot of information that could give you benefit in your life. Together with book everyone in this world could share their idea. Ebooks can also inspire a lot of people. Plenty of author can inspire their reader with their story or perhaps their experience. Not only the storyline that share in the guides. But also they write about the data about something that you need case in point. How to get the good score toefl, or how to teach your young ones, there are many kinds of book which exist now. The authors on this planet always try to improve their expertise in writing, they also doing some analysis before they write to the book. One of them is this Multiple Comparisons Using R.

#### **Myra McKenzie:**

Multiple Comparisons Using R can be one of your beginning books that are good idea. We all recommend that straight away because this book has good vocabulary that may increase your knowledge in terminology, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort that will put every word into pleasure arrangement in writing Multiple Comparisons Using R but doesn't forget the main point, giving the reader the hottest and based confirm resource info that maybe you can be one among it. This great information may drawn you into brand new stage of crucial thinking.

#### **Carmen Dana:**

As we know that book is very important thing to add our expertise for everything. By a publication we can know everything we wish. A book is a group of written, printed, illustrated or blank sheet. Every year has been exactly added. This reserve Multiple Comparisons Using R was filled regarding science. Spend your extra time to add your knowledge about your technology competence. Some people has different feel when they reading a book. If you know how big advantage of a book, you can feel enjoy to read a reserve. In the modern era like at this point, many ways to get book which you wanted.
