Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series)

Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series)

With existing petroleum oil and natural gas reserves enough for only several more decades, there is an imminent need for alternative energy sources. This critical situation has incited greater improvements in automotive technology and the increased use of nonconventional fuels. **Alternative Fuels for Transportation** covers the potential, production methods, properties, vehicle tests, merits, and drawbacks of alternative fuels. The esteemed editor highlights the importance of moving toward alternative fuels and the problems and environmental impact of depending on petroleum products.

Each self-contained chapter focuses on a particular fuel source, including vegetable oils, biodiesel, methanol, ethanol, dimethyl ether, liquefied petroleum gas, natural gas, hydrogen, electric, fuel cells, and fuel from nonfood crops. For most of these fuels, production methods, storage, transportation and distribution, physiochemical properties, system modification, engine tests, economics, applications, safety aspects, material compatibility, and future scope are discussed.

Although we now know that increases in greenhouse gases will contribute to global climate change, the transportation sector and decentralized power generation continue to heavily rely on petroleum products, particularly gasoline and diesel. Exploring how to counteract the world's energy insecurity and environmental pollution, this book provides a comprehensive understanding of nonconventional fuel sources and technology.

From reader reviews:

Alice Hill:

Nowadays reading books become more and more than want or need but also turn into a life style. This reading behavior give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside the book which improve your knowledge and information. The details you get based on what kind of publication you read, if you want send more knowledge just go with training books but if you want sense happy read one with theme for entertaining like comic or novel. Typically the Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series) is kind of e-book which is giving the reader capricious experience.

Alan Dougherty:

The actual book Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series) has a lot associated with on it. So when you check out this book you can get a lot of gain. The book was compiled by the very famous author. Mcdougal makes some research prior to write this book. This particular book very easy to read you can get the point easily after looking over this book.

Nellie Kim:

You may spend your free time to read this book this publication. This Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series) is simple to develop you can read it in the area, in the beach, train as well as soon. If you did not include much space to bring typically the printed book, you can buy the e-book. It is make you better to read it. You can save the actual book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

Carmela Williams:

Do you like reading a guide? Confuse to looking for your preferred book? Or your book had been rare? Why so many problem for the book? But just about any people feel that they enjoy for reading. Some people likes studying, not only science book but novel and Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series) as well as others sources were given information for you. After you know how the great a book, you feel would like to read more and more. Science guide was created for teacher or even students especially. Those books are helping them to bring their knowledge. In some other case, beside science guide, any other book likes Alternative Fuels for Transportation (Mechanical and Aerospace Engineering Series) to make your spare time far more colorful. Many types of book like this one.
