The rising tide of threats, from financial cybercrime to asymmetric military conflicts, demands greater sophistication in tools and techniques of law enforcement, commercial and domestic security professionals, and terrorism prevention. Concentrating on computational solutions to determine or anticipate an adversary's intent, Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind discusses the technologies for opponent strategy prediction, plan recognition, deception discovery and planning, and strategy formulation that not only applies to security issues but also to game industry and business transactions.

Addressing a broad range of practical problems, including military planning and command, military and foreign intelligence, antiterrorism, network security, as well as simulation and training systems, this reference presents an overview of each problem and then explores various approaches and applications to understand the minds and negate the actions of your opponents. The techniques discussed originate from a variety of disciplines such as stochastic processes, artificial intelligence planning, cognitive modeling, robotics and agent theory, robust control, game theory, and machine learning, among others. The beginning chapters outline the key concepts related to discovering the opponent's intent and plans while the later chapters journey into mathematical methods for counterdeception. The final chapters employ a range of techniques, including reinforcement learning within a stochastic dynamic games context to devise strategies that combat opponents.

By answering specific questions on how to create practical applications that require elements of adversarial reasoning while also exploring theoretical developments, Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind is beneficial for practitioners as well as researchers.

From reader reviews:

Omar Stewart:

The book Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind (Chapman & Hall/CRC Computer and Information Science Series) make one feel enjoy for your spare time. You may use to make your capable far more increase. Book can for being your best friend when you getting stress or having big problem along with your subject. If you can make reading through a book Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind (Chapman & Hall/CRC Computer and Information Science Series) to get your habit, you can get much more advantages, like add your capable, increase your knowledge about a few or all subjects. You could know everything if you like start and read a guide Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind (Chapman & Hall/CRC Computer and Information Science Series). Kinds of book are several. It means that, science publication or encyclopedia or others. So , how do you think about this e-book?

Kevin Blais:

Are you kind of busy person, only have 10 or perhaps 15 minute in your day to upgrading your mind proficiency or thinking skill even analytical thinking? Then you have problem with the book compared to can satisfy your short time to read it because pretty much everything time you only find guide that need more time to be learn. Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind (Chapman & Hall/CRC Computer and Information Science Series) can be your answer because it can be read by a person who have those short free time problems.

Evelyn Nay:

Reading a book being new life style in this season; every people loves to learn a book. When you examine a book you can get a lot of benefit. When you read ebooks, you can improve your knowledge, since book has a lot of information in it. The information that you will get depend on what types of book that you have read. In order to get information about your examine, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, these us novel, comics, as well as soon. The Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind (Chapman & Hall/CRC Computer and Information Science Series) provide you with a new experience in looking at a book.

John Hayes:

Reading a publication make you to get more knowledge from that. You can take knowledge and information from your book. Book is written or printed or outlined from each source that will filled update of news. With this modern era like today, many ways to get information are available for anyone. From media social including newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your understanding by that book. Isn't it time to spend your spare time to spread out your book? Or just in search of the Adversarial Reasoning: Computational Approaches to Reading the Opponent's Mind

(Chapman & Hall/CRC Computer and Information Science Series) when you required it?
