## **Cervico-Occipital Joint (RX, CT): 158 Radiological Exercises for Students and Practitioners (Exercises in Radiological Diagnosis) Auguste Wackenheim**

Like my first book of exercises in radiological diagnosis concerning the vertebrae in adults, the first part of this book consists of an atlas of images ready for immanent reading. The images are numbered, each number corresponding to a case. The second part comprises the corresponding comments, critical interpretations, and drawings (using the same numbers as the corresponding radiographs in the first part). I hope that this second booklet will be as appreciated as was the first, which was published in four languages (Radio diagnosis of the Vertebrae in Adults. Springer, Berlin Heidelberg New York 1983). My own documentation having proved deficient in some fields, I had recourse to the didactic collections of my colleagues, friends, and students. Special thanks are due to Prof. J. F. Bonneville, and to Drs. J. L. Dietemann, Y. Dirheimer, J. C. Dosch, and J. Vignaud. AUGUSTE WACKENHEIM VII Contents Introduction ..... 1 Part One: Iconography 5 Part Two: Commentary with Corresponding Schemata. 107 References . . 189 Subject Index 191 IX Introduction The analysis or the reading of an X-ray picture proceeds from structuralistic rules, such as the immanence, the synchronism, the signification (signifiant and signifié of a sign), first from the semeiologic and then from the semantic point of view. In a simpler way, one can say that it is necessary to distinguish the signifiant, the signifié, the comment, the interpretation, and the radiobioclinical confrontation. The signifiant or character is a normal or pathological "characteristic" part of the image.
