Surgical Wound Healing and Management

Surgical Wound Healing and Management

Wound bed preparation can be defined as the process of removing dead tissue, debris, and contaminants from an injured site to facilitate healing and provide a more expedient means to patient recovery. This reference explores the critical role of surgery in wound bed preparation and management and provides a sound knowledge of wound mechanisms, physiology, and metabolic control. Founded on the expertise of internationally-recognized authorities, this source illustrates the many techniques utilized by surgeons to design optimal healing environments, maximize the efficacy of existing treatment modalities, and extract bacteria from a variety of wound situations resulting from burns, trauma, and disease.
